

Second Generation Wavelets

Settings

- interval
- non-uniform samples
- curves, surfaces, volumes

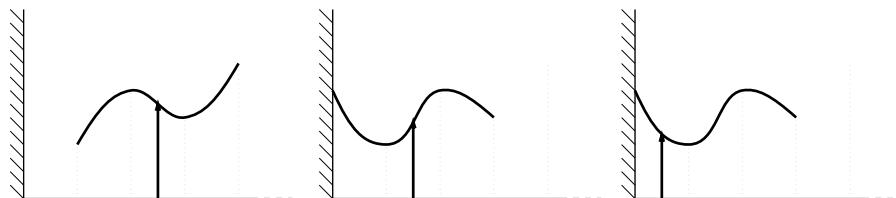

Second generation wavelets

- keep powerful properties
 - no translation and dilation
 - filters different everywhere
-

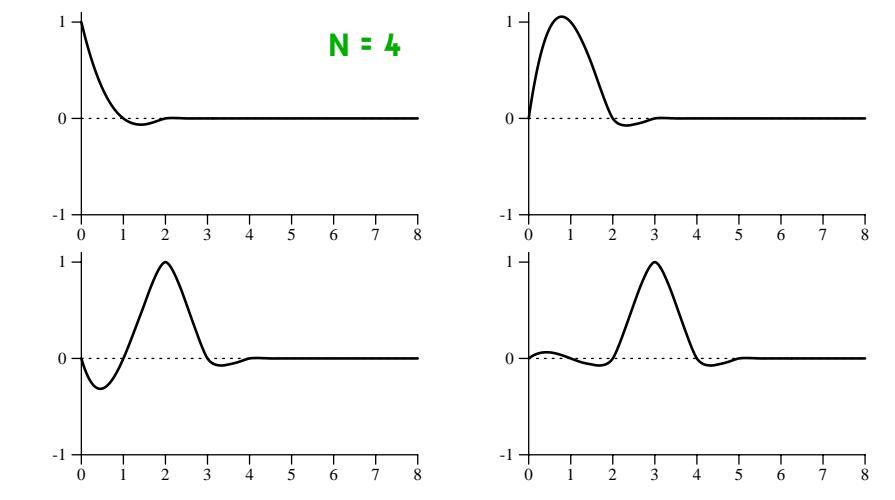

Interpolation

Boundary construction

- maintain polynomial order

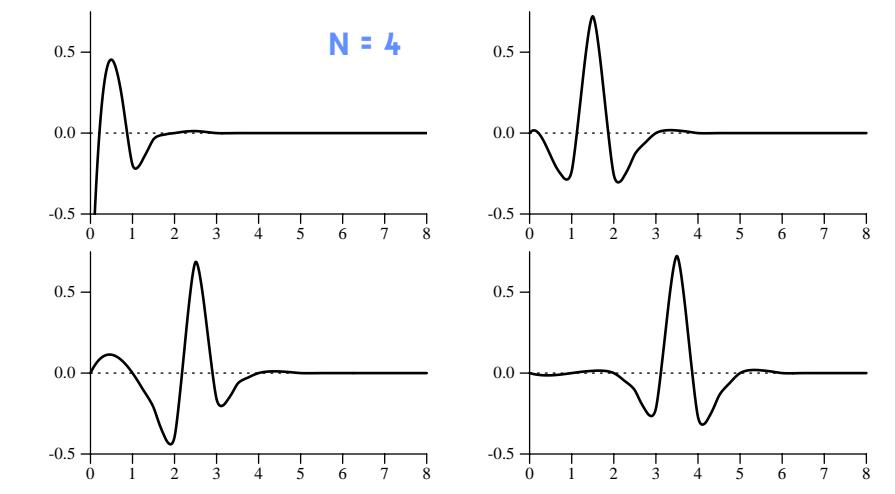

Scaling Functions

3

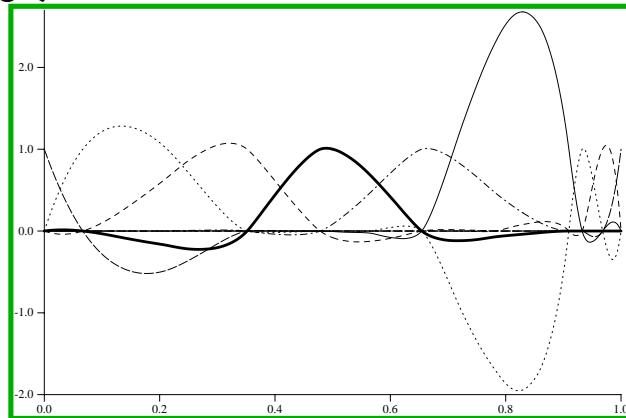

Wavelets

4

Irregular Samples

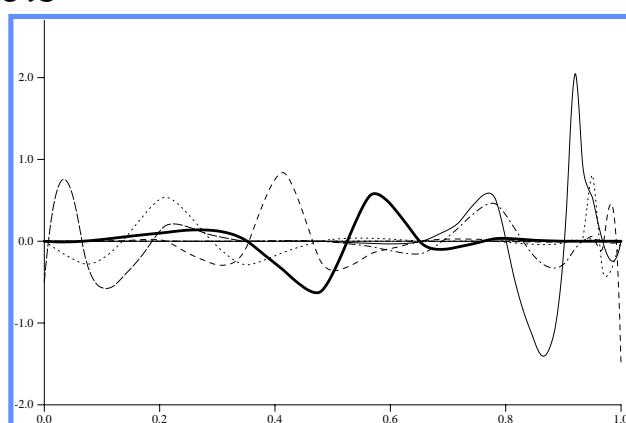

Scaling functions

5

Wavelets

ii

Weighted Inner Products

Length of interval $[a, b]$

$$\int_a^b w(x) dx$$

Example: approximate

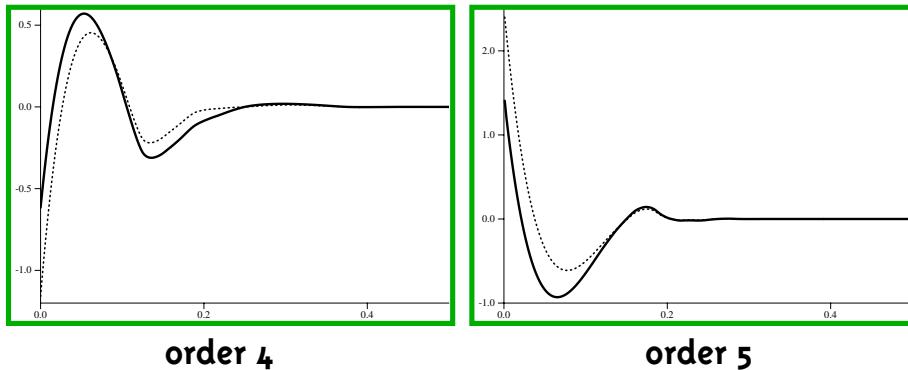

$$f(x) = \sin(4\pi\sqrt{x})$$

Choose

$$w(x) = \frac{1}{\sqrt{x}}$$

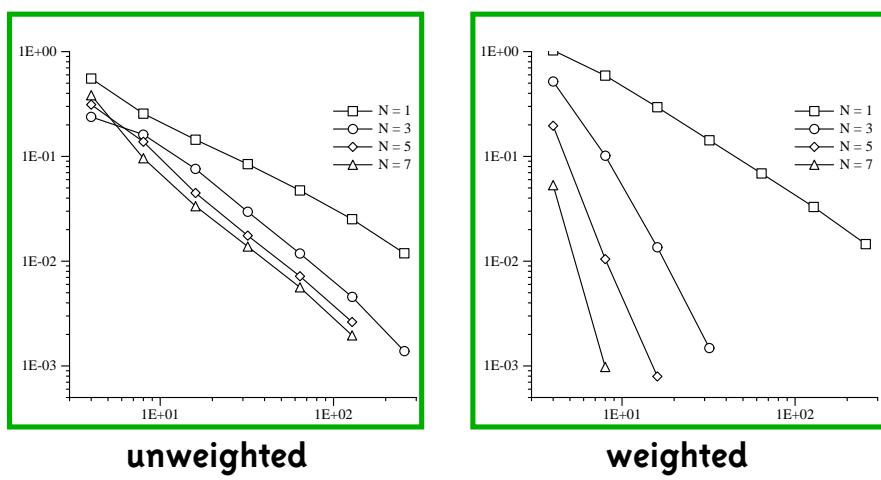

12

Weighted Wavelets
